

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1-12 (Canceled).

13. (Previously Presented) A laminated floor board comprising at least one cellulose sheet impregnated with a resin that is mechanically pressed and cut into a product, said product having a fiberboard core, wherein the product includes a surface, the product having both a perimeter area having an edge contour and an interior region, wherein the perimeter area is relieved such that a portion of the edge contour is below the interior region, wherein the interior region has a surface texture that varies in accordance with a visual pattern printed on the at least one cellulose sheet, wherein the visual pattern imitates another product.

14. (Previously Presented) A laminated floor board according to claim 13, wherein the edge contour has a substantially linear shape from the interior region to the edge contour region.

15. (Canceled)

16. (Previously Presented) A laminated floor board according to claim 13, wherein the portion of the edge contour that is below the interior region has been mechanically pressed below the interior region.

17. (Previously Presented) A laminated product that has been mechanically pressed and cut to form individual units thereof, each individual unit including a surface having an interior region and an edge contour region, wherein at least a portion of the edge contour region has been pressed below the interior region, wherein the interior region has a surface texture that varies in accordance with a visual pattern printed on the at least one cellulose sheet, wherein the visual pattern imitates another product.

18. (Previously Presented) A laminated product according to claim 17, wherein the edge contour region has a substantially linear shape from the interior region to the edge contour region.

19. (Canceled)

20. (Previously Presented) A laminated product according to claim 17, wherein the portion of the edge contour that is below the interior region has been mechanically pressed below the interior region.

21. (Previously Presented) A laminated product unit, comprising:

a cellulose core including a plurality of cellulose sheets, said cellulose sheets including at least one resin-impregnated cellulose sheet having a printed design;

depressed deformities extending from an upper surface of said cellulose core, said depressed deformities corresponding with the printed design; and

a perimeter rim including at least one depressed edge region.

22. (Previously Presented) The laminated product unit of claim 21, further comprising:

raised deformities extending from the upper surface of said cellulose core; said raised deformities corresponding the printed design.

23. (Previously Presented) The laminated product unit of claim 21, further comprising a surface texture that varies in accordance with the printed design.
